Drug Shortage Trend Over Time

Top 10 Drugs by Shortage Records

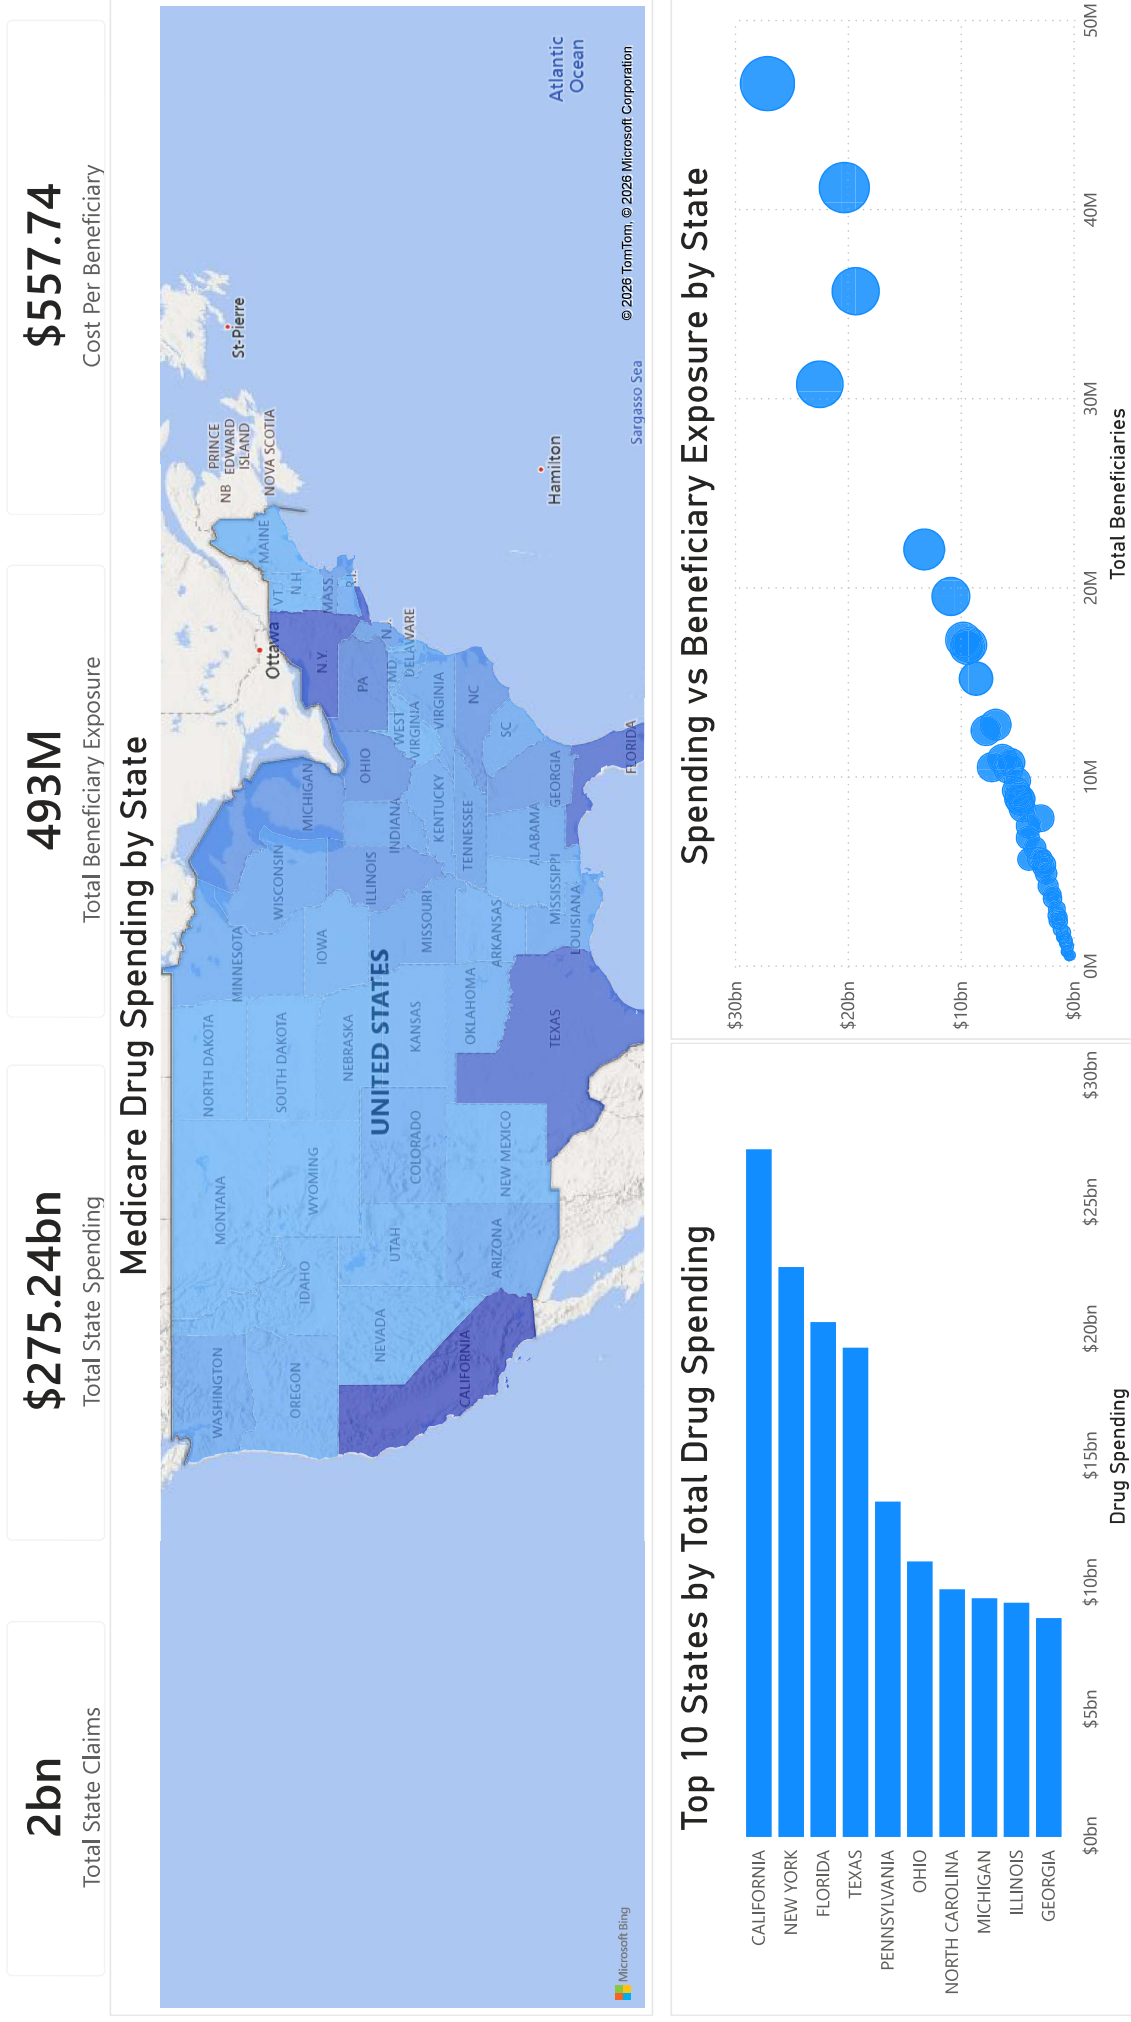

Shortage Risk by Therapeutic Category

Key Finding: Shortages peaked in **2023** and **2025**. Anesthesia and Psychiatry are the most affected categories, Lisdexamfetamine leads individual drug shortages with 90 shortage records ,while **68%** of all shortages remain unresolved, indicating persistent supply chain risk and reduced access to critical therapies.

Geographical Exposure & Spending

Key Finding: Medicare drug spending is concentrated in highly populated states, with **California (\$27B)**, **New York (\$22B)**, and **Florida (\$20B)** leading national expenditures. The strong positive relationship between beneficiaries and spending indicates that population size is a key driver of healthcare costs across states.
